# The 40<sup>th</sup> Anniversary Meeting The 7<sup>th</sup> International Orthodontic Conference

## Merging Orthodontics with Digital Technologies in a Transforming Social Structure

In recent years, the environment surrounding orthodontics has changed rapidly with the development of digital technology, various clinical techniques, and new devices. However, it is also true that there are still some orthodontic treatments that are not adequate. Reform and the challenge of the new are essential to the development of things, but how is digital technology going to be involved in the clinical practice of the Zerobase Bioprogressive Philosophy, which is based on a biological background.

In this meeting, we would like to have lectures by doctors who are active in the front line of research and development of advanced medical treatment and clinical practice, to organize the merits and demerits of new treatment by technological innovation, and to discuss the sound development of orthodontic practice from a global perspective. We sincerely look forward to your participation.
